About Our Program

This 39-hour, State-approved course offered in partnership with the Massachusetts Water Works Association, is designed to introduce the concepts of drinking water distribution operations. This course is a pre-requisite for taking the drinking water licensing exam(s) for water distribution, grades D2, D3, or D4 and is a required component for eligibility as an operator-in-training or a full license operator.

Participants will learn required information and critical thought processes involved in an understanding of the successful operation and maintenance of drinking water distribution systems.

Topics include: piping, pumps, hydraulics, valves, motors, meters, backflow, system security installation, safety and testing to name a few.

Through a combination of lecture and group discussion, each distribution system task and/or maintenance technique will be reviewed and then discussed in depth.

Who should take this course?

- Any individual presently working in the drinking water distribution field who would like to pursue career advancement by taking the D1, D2, D3, or D4 exams (The course is required for D2, D3, and D4 exams. It is not required for D1, but will provide a good background for it.)
- Any individual seeking a new career in the drinking water distribution field, who has a GED or high school diploma and who enjoys hands-on work, problem-solving, and mechanical tasks.

Did you know?

As of January 2012, in order to sit for the State drinking water exams (D2-D4), the Massachusetts Board of Certification of Operators of Drinking Water Supply Facilities established new training requirements. To sit for D2, D3, D4 exams, individuals must take the Concepts and Practices of Drinking Water Distribution course.

There are two other required courses for those seeking Drinking Water Treatment exams.

Is your employer paying for this course?

If so, please check "Employer Payment Option" on the attached registration form.

Concepts and Practices of Drinking Water Distribution

CRN: 13402 / Course: CSTT010 M3
